Vulnerability Scanning Subscription Services

Why?

Today's business network infrastructure is rapidly changing with new servers, services, ports and connections on a continual and sometimes daily frequency. With the growing number of vulnerabilities and exploits associated with the continual evolution of IT infrastructure, organizations now require more frequent vulnerability assessments.

These assessments must naturally be performed with the latest of vulnerability knowledge and expertise. Thus security expenses have been rising whereas overall budgets have not.

How it works?

Network Vulnerability Scanning Subscription

Audit your network perimeter for security vulnerabilities with this easy to use service. This service performs security checks on your network components including firewalls, routers, servers and any other IP connected device on your network that face the internet directly.

Leverage our network vulnerability scanning service to complement your IT security strategy by:

- Addressing network security threats regularly
- Receiving accurate vulnerability assessment data
- Freeing up resources from discovery, analysis and research to focus on resolving or mitigating threats before they can be exploited
- Obtain meaningful results, including corrective actions
- React quickly to security threats with a reduced lead time
- Reduce ongoing costs required to maintain the same level of network security

Web Application Vulnerability Scanning Subscription.

Extend your security confidence beyond just your network and perform regular audits on your web server, pages and web applications.

Our Web Application Vulnerability Scanning Service quickly and easily provides you with a report detailing common security vulnerabilities such as:

- SQL/Code Injection (PHP/ASP/etc..) & Command Execution
- Arbitrary file access (download/upload) & Directory Traversal
- Remote file listing, inclusion & Cross Site Scripting (XSS)
- Source disclosure, Debug Code & Denial of Service attacks
- Known Application vulnerabilities (from vendors & other sources)

Differential reports

Every subscription service comes with weekly differential reports, providing you with a simple, fast and accurate analysis of your network between any two points in time.

The reports include:

- An executive summary, giving you a breakdown of your network health at a glance
- Detailed list of new vulnerabilities identified since the first scan
- Detailed listing of remediated vulnerabilities, resolved in the newer scan
